

SERVO PELLETT MILL AUTOMATION SYSTEM

Servo Pellet Mill Automation System allows an operator to specify set points and monitor equipment. Mixed raw material is transferred to the pellet mill from the Mixer. Automatic operation of the pellet mill is started from the human-machine interface (HMI) touchscreen monitor. The user selects a formula containing the pelleting process set points and parameters so the pellet mill PLC knows how to configure and startup the pellet mill properly..

AUTO RUN-SHUTDOWN - AUTO GREASING - DOOR AJAR - OIL PRESSURE - CHAMBER TEMPERATURE - AUTO FEED CONTROL - AUTO COOLER CONTROL - AUTO OVERLOAD PROTECTION - ON SCREEN ALARMS - MILL WORKING LOGS - MAINTANANCE SCHEDULE
