### **Laboratory Digester (Research)**

Research Digester

Usage : Preparation of pulp from various fibrous materials under specified and controlled temperature , pressure and time

Device Description: The Digester is a complete pulping unit for producing pulps by cooking wood chips in a manner similar to a commercial digester. The unit is easy to operate and features precise control of pulping variables to ensure good repeatability of results. A sampling line with cooling attachments allows liquor samples to be withdrawn safely during the cooking process and a control valve determines the circulation rate of cooking chemicals.
