PAPER TESTING WAXES

Model : PAP- 6051

Dennison Wax Pick is used for the evaluation of surface strength on Paper & Paperboard. Wax cross section area is 18x18 mm. Each Wax Pick is of hard resin non – oily type. Each box contains 8 sticks of same number. It is simple, easy to use and inexpensive.

TECHNICAL METHOD FOR USE

- Waxes are heated and applied to surface of the sheet.
- After cooling waxes are pulled from the surface of the shape.
- Wax is used to check if it has pulled fibre of coating from the surface.
- The highest value wax, which does not rapture the surface, is reported as the pick strength of the sheet.
