

PAP-TECH INK PROOFING KIT

MODEL: PAP-3071

It is designed for rapidly determining the yellowing properties / post color reversion number of different pulp grade.

The brightness of pulp specimens is measured before and after one hour exposure of the pulp to a combination of high humidity (100% R.H.) and high temperature in a special vessel with the results reported either as brightness of the reverted pulp, a loss in brightness or as a post color number.
