

CALLCONFINE® provides one of the most advanced solutions for Analog & Digital voice recording, quality monitoring, analytics! You don't have to compromise. You don't have to change. You don't even have to worry about the future. Call Confine! Voice Call Logger, our Windows based, Client/Server enabled phone voice logging software-based solution, provides the industry's highest level of capacity, reliability, scalability and flexibility. In addition to lightning-fast retrieval and playback. This recording solution offers options for sharing and distributing your recordings, plus outstanding capabilities for migration to future technologies that has been built upon your initial investment.

CALLCONFINE® Service & CALLCONFINE® Controller has been designed as an optimal recording system based on the needs of various organizations. You can choose from a suite of Analog or Digital line based call loggers with intuitive interface for user-friendly operation and easy access to all records with variety of options. Any number of selective channels - you can configure your recording system to records all or selective telephonic conversations. The inherent flexibility of callconfine, open architecture, combined with the most powerful SQL database assures easy, reliable management of high volume of records, variable archiving automation, custom integrations with other applications, and much more.

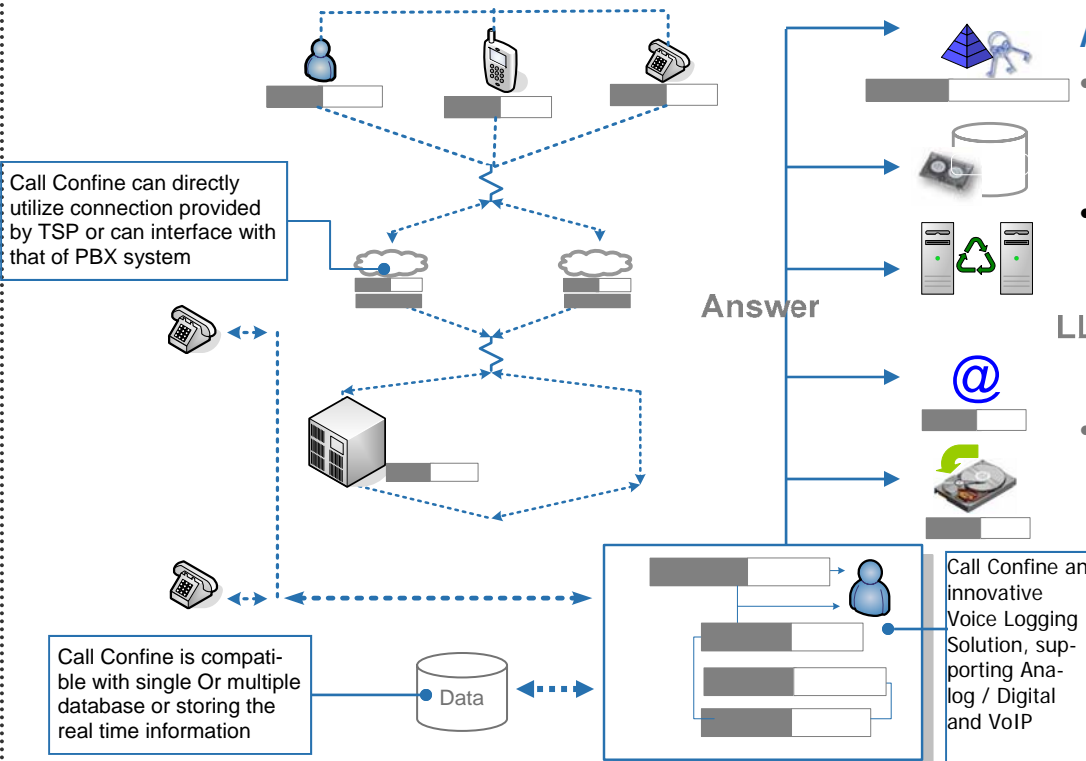

CALLCONFINE® Controller offers ultimate reliability and resiliency due to a wide variety of robust, fault-tolerant configurations that leverage standards-based components. Built around the principles of true open architecture, providing unmatched flexibility in inwards and outwards integrations, endless scalability, and limitless capacity. While our call recording software-based solutions focus on the future, our business practices are based upon good, old-fashioned values. We tell the truth, we're accountable, and we conduct business with utmost integrity.

CALLCONFINE® Synchronizer is designed and developed to manage and maintain calls getting logged at various branch location in one central location, Synchronization client is designated to auto or manually synchronize the call logs in centralized location, Synchronization Server is powered to manage the data synchronization from all locations and provide users the Centralized view of the calls according to Zone, State ,City and Branch.

**CallConfine is designed and developed to implement it across various industries, few of them are in line**

below:

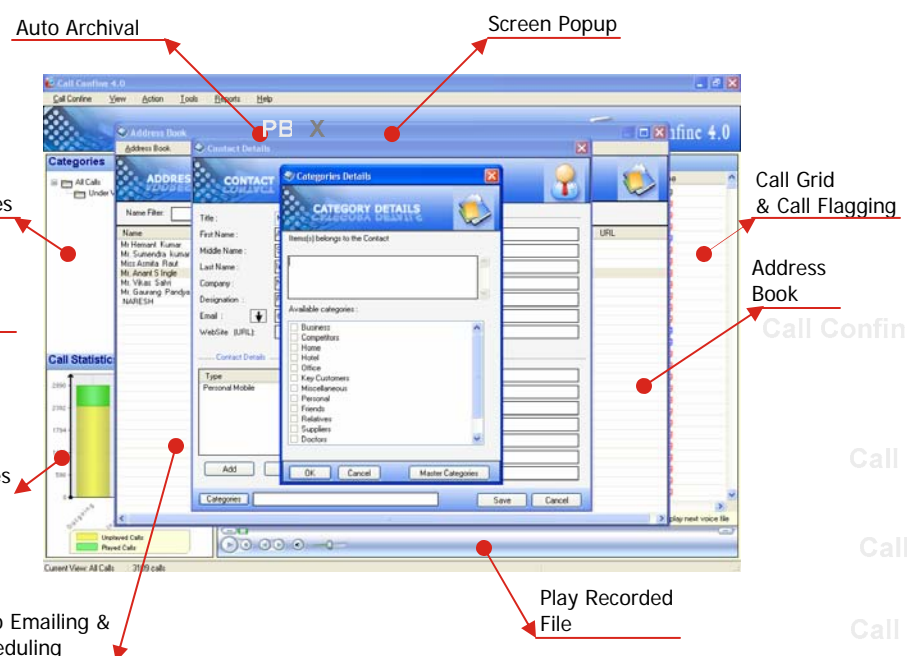

- Financial Services
- Financial Trading
- Government
- Health Care
- BPO / Call Centers
